

KwikPeek™

The New Portable Wireless Camera System

Save the battery power for when you really need it! Other wireless cameras will operate for a few hours before the batteries need to be replaced or recharged. The KwikPeek can operate for up to several months.

Features/Benefits

- Monitor areas where electrical power is unavailable or inconvenient
- Four channels per camera to help avoid interference
- The live streaming audio and color video can be heard and viewed on a standard television set or monitor
- Don't worry about forgetting to turn the camera off. It shuts off automatically after a predetermined amount of time.
- The KwikPeek is totally portable and can be easily moved from one indoor/outdoor location to the next
- The KwikPeek generally operates off of 3 AA batteries although an A/C adapter is included to allow for direct camera hookup and continuous viewing
- Adjustable code to keep others from turning your unit on
- A range of over 300 feet for large yards or business space
- Add up to 3 additional cameras on the same system

Easy Installation

- Open the plastic dome to turn the camera on. Place the dome at the location you wish to monitor. Plug the receiver's power cord into an a/c outlet and the a/v jacks into a television set. Turn the channel on the television to auxiliary. Push the "ON" button of the handheld transmitter and view real time video of your selected location.

How It Works

- When the "ON" button of the handheld transmitter is pressed a command signal is sent to turn the KwikPeek on. The KwikPeek then captures and sends real time audio/video to the receiver attached to the television. (The camera will transmit for up to 5 minutes at a time depending on the adjustable setting)

30 Day Money Back Guarantee

1 Year Manufacturer's Limited Warranty
